Nasal Cannula includes Universal Oxygen Tubing permitting oxygen tube to connect direct to oxygen flowmeter without nut-and-nipple adapter.

- Excellent sampling accuracy as there are two end tidal CO<sub>2</sub> sampling ports
- Superior waveforms as Dual has two end tidal CO<sub>2</sub> sampling ports
- Reliable sampling under the following conditions:
  - Clogged Sinus' in one nostril
  - Deviated septum
  - Polyps
- Oxygen delivered in both nostrils at lower rate, thus minimizing mucosal wall damage.
- Secure luer lock connection for both Male & Female connections
- Soft tip cannula provides superior patient comfort and nare positioning
- Non-kinking tube ensures consistent and accurate delivery
- Universal Oxygen connector is standard on all items

**Premium Performance, Maximum Safety**

Litholyme™ is a new CO<sub>2</sub> absorbent that eliminates the common concerns with traditional soda lime based products in that it eliminates the potential for production of compound A, carbon monoxide, and excessive heat. Its patented formula does not contain any NaOH or KOH, and features a permanent color change that will not revert over time.

Suitable for low flow applications, Litholyme is minimally exothermic, and its patented formula does not interact with sevoflurane or other commonly used inhalation anesthetic agents, even under fully desiccated conditions.

Litholyme features a permanent and profound white-to-violet color change that will indicate exhaustion or desiccation, eliminating the possibility for inadvertent use of expended product. Additionally, the deep violet color of exhausted or desiccated product will not fade or revert over time.

**Efficient Canister Life**

Litholyme has efficient CO<sub>2</sub> absorption properties which allow it to last as much as 30% longer than other premium CO<sub>2</sub> absorbents, making it the most cost effective option for a premium absorbent.

**MURPHY WITH CUFF ENDOTRACHEAL TUBES**

**Low Price!**

- Soft-rounded distal tip
- Crystal Clear PVC, making insertion markings easy to read
- High volume/low pressure cuff, elongated to equalize and reduce pressure against Tracheal tissue, assuring excellent seal, which may help to prevent VAP

**UNIVENT**

The Univent Single Lumen Endotracheal Tube simplifies bronchial placement by integrating a torque control blocker directly in a single lumen endotracheal tube. The Univent is a single lumen silicone endotracheal tube with an integral lumen containing a bronchial blocker. The key benefits of the Univent are:

- Standard intubation of the Univent into the Trachea.
- Easy control of the bronchial blocker for left or right bronchial placement.
- Polyurethane covered wire mesh bronchial blocker.
- The blocker incorporated a radio opaque ring to verify placement upon x-ray.
- The blue tracheal high volume low pressure silicone cuff reduces the risk of tearing during intubation.

**UNIBLOCKER**

Uniblocker is the only bronchial blocker that incorporates a steel mesh polyurethane covered shaft for direct control of the blocker into the targeted bronchus. This control allows for simple and intuitive placement of the blocker. In addition to simple placement, the Uniblocker incorporates a gas barrier bronchial cuff which reduces the diffusion of gas during anesthesia. The key benefits are:

- Simple placement for total segment bronchial blocker
- Removal of the blocker without detaching the circuit for long term ventilation.
- Placement through standard endotracheal tube.

Introducing the all new Endomask Eclipse 100% Disposable Silicone Laryngeal Mask Airway. Finally an LMA that combines patient comfort and ease of use at an economical price.

**Superior Silicone Cuffs** that conform to the natural contours of the hypopharynx for a perfect fit, allowing rapid, blind insertion, excellent seal and single hand ventilation. Cuffs are thick and durable with a smooth matte finish.

**No epiglottic bar** (aperture bar) obstructions enable easy access for a fiberscope and suction catheters.

**Top quality inflation lines** with self-sealing pilot balloons. The cuff assembly and tube body is smoother and has less voids and impurities within its structure than other silicone laryngeal masks.

MRI TESTED BLADES AND HANDLES

- Designed specifically for use in the MR environment
- Safe at the 720 gauss line in field strengths of 3.0 Tesla or less
- High intensity Xenon light bulb
- Long life lithium battery

Clinicians can perform intubations in the MR environment safe in the knowledge that the Diamond MRI Range has been tested up to the 720 gauss line in magnet field strengths up to 3.0 Tesla and has shown little or no deflection, image distortion or heating during use.

**Lithium battery**

This advanced battery technology is designed to provide approximately 8 hours life under continuous use. A typical alkaline battery will provide less than 2 hours of use under similar conditions.

**00-100 PLUS PERIPHERAL NERVE STIMULATOR**

The 00-100-PLUS Peripheral Nerve Stimulator is a lightweight, battery powered, hand held and adjustable stimulator. It is specifically designed for a wide range of clinical uses with both ball electrodes and various extension lead sets. Functions include Twitch, Train-Of-Four, and both 50Hz and 100Hz Tetanus. All functions are selected from membrane panel switches, under easy user control. Output voltage is fully adjustable, and functions can be set to automatically repeat (Twitch and TOF). LED indicators show the status of the device, low battery condition, the selected function, and pulse delivery. The 00-100-PLUS comes complete with ball electrodes and a 9v battery in an easily accessible compartment.

- The UPB stimulation needle offers a 30° back cut bevel, which facilitates the penetration thanks to the double bevel.
- Its overmoulded ergonomic hub covers the connection between the needle, avoiding any leak of liquid from the extension tube and the connecting cable.
- The needle is coated with insulating polyesters, and undergoes a dry siliconisation process in order to increase its smooth gliding capacity within the tissues, reducing the pain of the patient
- The bevel's surface is free from polyesters and its stimulation area extends along its entire length.
- With their 2 mm female electric connection, the needles are compatible with all standard peripheral nerve stimulators
- Sold 10 per box

**GERTIE MARX NEEDLES**

The Gertie Marx pencil point spinal anesthesia needle was specially designed to deliver a faster CSF flow to patients undergoing spinal anesthesia than other leading needles currently being utilized. Not only did the Gertie Marx spinal anesthesia needle deliver a CSF flow rate two times faster than a Whitacre needle, a study asserted that the Gertie Marx needle's failure rate was zero.

**AINCA VISUAL STYLET**

**Difficult Visualization Made Easy and Affordable**

The AincA VideoStylet is an inexpensive, lightweight, reusable “through the endotracheal tube” viewing system and introducing stylet. It allows the practitioner to obtain a direct view from the tip of the endotracheal tube as it progresses during intubation. This reusable stylet is a slender 5.8mm in diameter and is malleable along its entire length. It contains a powerful camera assembly with ultrabright LED illumination at the tip to deliver a crisp 2.4” (320 x 240 pixel) color image on a lightweight rechargeable LCD monitor. The stylet is waterproof and can be cleaned by scrub/wash/wipe, high-level disinfected in 2% Glutaraldehyde, or sterilized in Sterrad gas plasma hydrogen peroxide. The monitor is not waterproof, and should be cleaned/disinfected by wipe down only. The AincA Video Stylet is generally sold as a “Kit” containing one reusable/malleable stylet, a rechargeable LCD monitor, a USB/110v charger, and a user manual/ information guide.
